## **Environmental Control Corporation Announces the Commencement of Durability Testing on 2-Stroke Engine**

VANCOUVER, British Columbia - Environmental Control Corporation ("EVCC") is excited to announce that it is initiating durability testing of a 2-stroke, 185cc engine equipped with EVCC's catalytic muffler at Carnot Emissions Services (CES) today, November 28th, 2006. The testing process is expected to take two to four weeks and test results are to be provided shortly after.

The testing will be conducted with the aid of a multi-national company, which has shown a commitment to distributing environmentally sound, low emissions products and will provide the 2-stroke 185cc engine as well as pay all costs associated with this process. EVCC is currently unable to release the identity of their testing partner due to an existing confidentiality agreement; however, they look forward to a successful test result and a long term, mutually beneficial business relationship.

"EVCC is proud to be cooperating with this recognized industry leader. We eagerly anticipate the results from our durability testing and look forward to a further expansion of our business activities with a valued partner." Albert Hickman, President, EVCC.

2-stroke engines are still widely used in North America and internationally in various products such as lawn and garden equipment, portable firefighting pumps, generators, and personal transportation devices ranging from motorized scooters to snowmobiles. 2-stroke engines are a major polluter due to their basic combustion design as well as ongoing popularity. EVCC's ability to reduce emissions on these engines by up to 98.9%, as illustrated in our Environment Canada testing, promises to provide access to a multi-billion dollar market as well significantly help our environment.

### **About Environmental Control Corporation**

Environmental Control Corporation (OTCBB:EVCC - News) is a developer of Emission Control Devices for small Spark Ignition (SI) combustion engines. Typical devices within this spectrum include: walk behind rotary mowers, rear engine riding mowers, front engine lawn tractors, riding garden tractors, snow throwers, commercial turf mowers, chainsaws, hand held blowers, backpack blowers, trimmers/brush cutters, mopeds, scooters, snowmobiles, all-terrain vehicles and personal water crafts. Small SI engines produce approximately one tenth of U.S. mobile source hydrocarbon (HC) emissions and are the largest single contributor to non road HC inventories.

### **Notice Regarding Forward-Looking Statements**

This news release contains "forward-looking statements," as that term is defined in Section 27A of the Act and Section 21E of the Securities Exchange Act of 1934. Statements in this press release, which are not purely historical, are forward-looking statements and include any statements regarding beliefs, plans, expectations or intentions regarding the future. Such forward-looking statements include, among other things, future independent testing by Carnot Emissions Services (CES), any test results following such testing or the successful completion of any other durability testing future certification procedures, the exact capacity for emissions reductions in future applications, access to a multi-billion dollar market and significant help to the environment.

Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among others, the inherent uncertainties associated with the development of an early stage company in the emissions control industry and its products and the entry into new markets for such products. These forward-looking statements are made as of the date of this news release, and Environmental Control assumes no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements. Although Environmental Control believes that the beliefs, plans, expectations and intentions contained in this press release are reasonable, there can be no assurance those beliefs, plans, expectations or intentions will prove to be accurate. Investors should consider all of the information set forth herein and should also refer to the risk factors disclosed in the Company's current and periodic reports filed from time to time with the Securities and Exchange Commission.
